Mario

Implement a program that prints out a half-pyramid of a specified height, per the below.

```
$ python mario.py
Height: 4
#
##
###
####
```

Getting Started

Log into code.cs50.io (<https://code.cs50.io/>), click on your terminal window, and execute `cd` by itself. You should find that your terminal window's prompt resembles the below:

```
$
```

Next execute

```
wget https://cdn.cs50.net/2022/fall/psets/6/sentimental-mario-less.zip
```

in order to download a ZIP called `sentimental-mario-less.zip` into your codespace.

Then execute

```
unzip sentimental-mario-less.zip
```

to create a folder called `sentimental-mario-less`. You no longer need the ZIP file, so you can execute

```
rm sentimental-mario-less.zip
```

and respond with “y” followed by Enter at the prompt to remove the ZIP file you downloaded.

Now type

```
cd sentimental-mario-less
```

followed by Enter to move yourself into (i.e., open) that directory. Your prompt should now resemble the below.

```
sentimental-mario-less/ $
```

Execute `ls` by itself, and you should see a `mario.py`. If you run into any trouble, follow these same steps again and see if you can determine where you went wrong!

Specification

- Write, in a file called `mario.py`, a program that recreates the half-pyramid using hashes (`#`) for blocks, exactly as you did in [Problem Set 1](#), except that your program this time should be written in Python.
- To make things more interesting, first prompt the user with `get_int` for the half-pyramid's height, a positive integer between `1` and `8`, inclusive.
- If the user fails to provide a positive integer no greater than `8`, you should re-prompt for the same again.
- Then, generate (with the help of `print` and one or more loops) the desired half-pyramid.
- Take care to align the bottom-left corner of your half-pyramid with the left-hand edge of your terminal window.

Usage

Your program should behave per the example below.

```
$ python mario.py
Height: 4
#
##
###
####
```

Testing

While `check50` is available for this problem, you're encouraged to first test your code on your own for each of the following.

- Run your program as `python mario.py` and wait for a prompt for input. Type in `-1` and press enter. Your program should reject this input as invalid, as by re-prompting the user to type in another number.
- Run your program as `python mario.py` and wait for a prompt for input. Type in `0` and press enter. Your program should reject this input as invalid, as by re-prompting the user to type in another number.
- Run your program as `python mario.py` and wait for a prompt for input. Type in `1` and press enter. Your program should generate the below output. Be sure that the pyramid is aligned to the bottom-left corner of your terminal, and that there are no extra spaces at the end of each line.

```
#
```

- Run your program as `python mario.py` and wait for a prompt for input. Type in `2` and press enter. Your program should generate the below output. Be sure that the pyramid is aligned to the bottom-left corner of your terminal, and that there are no extra spaces at the end of each line.

```
#
##
```

- Run your program as `python mario.py` and wait for a prompt for input. Type in `8` and press enter. Your program should generate the below output. Be sure that the pyramid is aligned to the bottom-left corner of your terminal, and that there are no extra spaces at the end of each line.

```
#
##
###
####
#####
#####
#####
#####
```

- Execute seu programa como `python mario.py` e aguarde um prompt para entrada. Digite `9` e pressione enter. Seu programa deve rejeitar essa entrada como inválida, solicitando novamente que o usuário digite outro número. Em seguida, digite `2` e pressione enter. Seu programa deve gerar a saída abaixo. Certifique-se de que a pirâmide esteja alinhada com o canto inferior esquerdo do seu terminal e que não haja espaços extras no final de cada linha.

```
#
##
```

- Execute seu programa como `python mario.py` e aguarde um prompt para entrada. Digite `foo` e pressione enter. Seu programa deve rejeitar essa entrada como inválida, solicitando novamente que o usuário digite outro número.
- Execute seu programa como `python mario.py` e aguarde um prompt para entrada. Não digite nada e pressione enter. Seu programa deve rejeitar essa entrada como inválida, solicitando novamente que o usuário digite outro número.

Execute o abaixo para avaliar a exatidão do seu código usando `check50`. Mas certifique-se de compilar e testar você mesmo também!

```
check50 cs50/problems/2023/x/sentimental/mario/less
```

Execute o abaixo para avaliar o estilo do seu código usando `style50`.

```
style50 mario.py
```

Como enviar

Em seu terminal, execute o abaixo para enviar seu trabalho.

```
submit50 cs50/problems/2023/x/sentimental/mario/less
```
